Quarantine Data Dashboard

1. Vision Statement

For members of the HKSAR Covid Task Force who has to deal with quarantine issues and wish to easily access to an overview of the current covid situation, the Quarantine Data Dashboard is a web dashboard that will allow user to access to the newest information of the current covid and quarantine center's situation while ensuring the correctness of the data.

Unlike the messy original source of data, Quarantine Data Dashboard simplifies the data to a one-page product for quick navigation and will also alert the user when the data is not consistent.
